Mindtree
Welcome to possible

Test process consulting.

Enterprises have realized the importance of testing in mitigating risks to the business and delivery of their products and services. They are also finding that testing can be expensive and time consuming. Testing should provide quantifiable results about the level of uncertainty of a product / application. It must provide meaningful information to the business about risks & impacts for effective decision making. The dilemma most organizations are facing is to determine how much testing is enough and when do we need more?

TCoE (Test Center of Excellence) is the path to success. TCoE will set the frameworks and standards which help business and technology teams determine testing needs customized to the current situation or application under test (AUT). The standard / TCoE framework enables management to understand the risks involved when deciding on removing certain delivery processes for that AUT.

Our solution

Mindtree provides an integrated suite of tools and processes to help customers achieve their quality objectives. We call it MindTest™. This methodology has benefitted many of our customers, enabling continuous improvement in their quality and process. It has helped them constantly monitor and evaluate what is best suited for achieving success.

Our experienced quality and test consultants first understand and evaluate existing processes and systems. This is usually undertaken as a two or three-week workshop aimed at test management and process improvement. We have experienced and highly skilled resources with sound understanding of high quality application/product delivery.

Our offering

Assessment, options and recommendations

- Test strategy
- Test organization
