

## Built a CADIS center of excellence and reduced time to market for a UK based large fund manager.

The recent emphasis on regulatory compliance, SOA and mergers and acquisitions has made creating and maintaining accurate and complete master data, a business imperative.

Here's how Mindtree helped a global fund manager, managing over £26.5 billion of assets, maintain their master data using CADIS. The solution made it possible for the customer to shrink the testing cycle and accelerate time to market.

### The challenge

The customer had implemented CADIS, an enterprise data management solution, as a central data hub. Lack of expertise on CADIS internally and the challenge of retaining skilled CADIS experts, added to the customer's problem. This led to the need for change management, to adapt to the needs of CADIS technology.

In addition, the customer was facing challenges in development, deployment and testing of applications. Deploying CADIS across different environments was time consuming as it was done manually. The time spent during the entire testing cycle, including system, integration and user acceptance alleviated the concerns.

They needed a technology partner with expertise in CADIS to take complete ownership of application development, maintenance and support of their CADIS applications.

### Business impact

- Reduced development time and improved quality of build
- Reduced the deployment time by 35% through process automation
- Decreased post production issues / bugs reducing the time to market
- Significantly reduced the testing cycle through proven test methodologies

## Our solution

Mindtree built a CADIS Centre of Excellence (CoE) for the customer. The CoE provided application maintenance and development support for the CADIS implementation. Mindtree implemented standard tracking processes and metrics to improve the effectiveness of the deliverables.

We also implemented AutoREL, a CADIS project release automation tool for the customer to reduce the CADIS build deployment time across environments. To improve testing, we implemented industry standard test processes that considerably improved the quality.
