

Mindtree

A Larsen & Toubro Group Company

**New age
business model
for investment
monitoring**

~~The Client~~

A leading financial investment solutions provider

Challenges

- Customer did not have platform to provide investment monitoring facility for investors
- Investors defined rules of investments for Fund Managers, but had no transparency in tracking a breach
- Customer wanted a platform (infrastructure) to do pilot tests for their customers and demolish the infrastructure setups after use

Solutions

- Built an interface for dashboard reports (performance, guidelines, and risk) with a breakdown by investor and fund or any other level of granularity
- Hosted the interface on AWS cloud. Security groups, VPN gateway and Active directory were used for an authorized access
- Encrypted Data on the drives on key based mechanism. Data backups and image transfers were also encrypted
- MWatch monitoring was used to monitor the server

Benefits

- The tool provides transparency and let to timely decision-making
- With an availability of data on cloud, Investors could access reports through mobiles
- Low latency, quick scaling (up or down) of infrastructure as per need
- Auto scaling and self-healing intelligence
- Pay as you go benefits
- Higher Availability and Data Recovery
